

OVERVIEW & TRACKING OBJECTIVES

Establish a robust, data-driven tracking framework to accurately measure campaign performance, capture high-value user actions, attribute revenue to specific keywords, and feed Google's machine-learning bidding algorithms with clean conversion signals.

CONVERSION GOALS & VALUE MAPPING

Conversion Action	Goal Type	Bidding Optimization	Estimated Value	Tracking Method
Perplexity Pro Subscription	Purchase / Revenue	Primary (Maximize Conversion Value)	\$20.00 (Monthly)	Google Ads Tag via GA4
Education Plan Signup	Purchase / Lead	Primary (Maximize Conversions)	\$10.00	Firebase / Web Webhook
Account Sign-Up (Free Tier)	User Growth	Secondary (Observation Only)	\$1.00	Google Ads Tag / GA4
App Download (iOS/ Android)	Mobile Growth	Secondary (Observation Only)	\$2.50	Firebase SDK Link

KEY PERFORMANCE INDICATORS (KPIs)

1. VOLUME & AWARENESS • Impressions: Total times our RSAs are displayed on the SERP. • Clicks: Total traffic directed to perplexity.ai.	2. EFFICIENCY METRICS Click-Through Rate (CTR): $CTR = (Clicks / Impressions) \times 100$ Target: > 5% Generic, > 12% Brand • CPC: Actual price paid per click.	3. BOTTOM-LINE PERFORMANCE Conversion Rate (CVR): $CVR = (Conversions / Clicks) \times 100$ Target: > 8% free signups • Conversions: Total completed high-value actions. • CPA: Spend / Conversions. Target Pro CPA: < \$15.00.

GA4 CUSTOM EVENT FRAMEWORK

1. Event Name: <code>page_view</code> Trigger: User lands on home page or /pro landing pages. Parameters Collected: page_location, page_referrer

2. Event Name: **sign_up**

Trigger: User successfully creates a free account via Google, Apple, or Email.

Parameters Collected: method (e.g., "google", "email")

3. Event Name: **begin_checkout**

Trigger: User clicks "Upgrade to Pro" and opens the Stripe payment module.

Parameters Collected: value (20.00), currency ("USD")

4. Event Name: **purchase**

Trigger: User successfully processes payment and hits receipt screen.

Parameters Collected: transaction_id, value (20.00), currency ("USD")

5. Event Name: **app_download**

Trigger: User clicks the App Store or Google Play redirect badges.

Parameters Collected: platform (e.g., "ios", "android")

THE CONVERSION FUNNEL DROP-OFF MATRIX

Macro Funnel Scale: [100,000 Impressions] → [8,000 Clicks] → [5,600 Active Users] → [840 Sign-Ups] → [42 Paid Pro Subs]

Stage Transition	Metric Action	The Drop-Off / Friction Point Explained
Impressions → Clicks	~8% CTR	92% Core Drop-off: Potential mismatch between search intent and ad headlines, or low ad-rank visibility.
Clicks → Active Users	~30% Bounce Rate	30% Immediate Loss: Traffic lands but leaves without interacting. Indicates slow page-load speeds or weak visual hooks.
Active Users → Sign-Ups	~15% Conversion	85% Friction Loss: Users test the AI tool but choose not to save their history. Sign-up flow might feel too forced or premature.
Sign-Ups → Paid Pro Subs	~5% Upgrade Rate	95% Monetization Gap: Users find value in the free tier but don't see enough urgency or premium differentiation to pay \$20/mo.

DATA-DRIVEN PERFORMANCE OPTIMIZATION PLAN

Trimming Keyword Waste

Identify keywords with high spend but zero conversions over a 30-day window. Pause them or transition them to exact match types to preserve budget.

Aggressive Scaling

Identify keywords maintaining a CPA lower than our target (<\$15). Increase their max-CPC caps or allocate more daily budget to capture additional impression share.

Creative Iteration (A/B Testing)

Replace the lowest-performing headlines and descriptions highlighted by Google's asset health report with fresh, benefit-focused variations.

Keyword Alpha/Beta Expansion

Take high-converting search queries found in our Search Terms Report and elevate them into dedicated, target ad groups.

Landing Page Conversion Optimization

If an ad has a high CTR but a low conversion rate on the site, run user testing and A/B tests on the landing page (e.g., changing the sign-up button placement) to minimize traffic leakage.
