

OVERVIEW & EXECUTIVE SUMMARY

Establish a unified reporting framework to synthesize high-volume search data into actionable executive insights. This dashboard evaluates macro-level efficiency alongside deep granular tables to maintain strict control over ad spend, ROAS, and customer acquisition costs.

CAMPAIGN OVERVIEW (MACRO METRICS)

TOTAL IMPRESSIONS 458,210	TOTAL CLICKS 34,824	AVG. CTR 7.60%	AVG. CPC \$1.42
TOTAL CONVERSIONS 1,882	CONVERSION RATE 5.40%	CPA \$26.28	ROAS 3.2x

CAMPAIGN PERFORMANCE BREAKDOWN

Campaign Name	Impressions	Clicks	CTR	Avg. CPC	Conversions	CPA	ROAS
[Search] - Brand Campaign	95,400	14,310	15.00%	\$0.35	930	\$5.38	8.4x
[Search] - Generic Campaign	240,500	14,430	6.00%	\$1.65	650	\$36.63	1.8x
[Search] - Competitor Campaign	122,310	6,084	4.97%	\$2.50	302	\$50.36	2.1x

KEYWORD PERFORMANCE BREAKDOWN

perplexity pro free	"Phrase"	1,200	9.5%	12	1.00%	\$150.00	Pause

SEARCH TERM INSIGHTS & STRATEGIC TAKEAWAYS

Brand Campaign Dominance

The Brand Campaign secured the highest overall CTR (15.00%) and a massive 8.4x ROAS, indicating clear search navigation intent and strong baseline corporate identity awareness.

Generic Top-of-Funnel Engine

The Generic Campaign acted as our biggest engine for net-new customer acquisition, delivering 650 conversions. While its CPA (\$36.63) is higher than brand search, it scales our top-of-funnel customer pool effectively.

Competitor Aggression

The Competitor Campaign featured our highest average CPC (\$2.50) due to intense auction bidding against rival tools. However, those users converted at a highly profitable baseline valuation, validating our conquering strategy.

Mobile-First Signals

Mobile users generated 65.9% of all platform sign-ups, confirming that quick-action app installations and conversions happen on mobile devices, while desktop users preferred long-form research deep diving.

DATA-DRIVEN OPTIMIZATION RECOMMENDATIONS

Budget Reallocation

Shift 15% of underutilized daily ad spend from low-converting Generic phrase-match groups directly into the high-ROAS Brand Campaign to maximize impression share against brand poaching.

Negative Keyword Scrubbing

Immediately add terms like "free", "cracked", and "hack" as account-wide negative keywords to permanently eliminate high-CPA keyword leakage like *perplexity pro free*.

Mobile-First Landing Page Adjustments

Simplify the mobile user signup screen by introducing single-tap Google and Apple OAuth buttons, directly reducing mobile drop-off rates.

RSA Copy Adjustments

Take the winning trust-signal copy variants from our Brand ad groups (e.g., "Trusted by 10M+ Researchers") and introduce them into our underperforming competitor ad groups to boost lower click-through rates.
